Question 36.2023:

A random variable X, distributed normally as N(0,1), undergoes the transformation Y=h(X), given in Fig. 0. The form of probability density function of Y is (In the options given below, a,b,c are non-zero constants and g(y) is piece-wise continuous function).

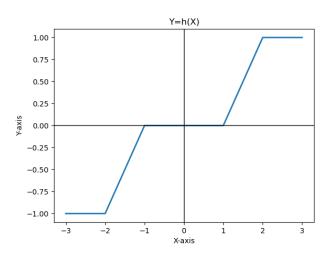

Fig. 0

1) $a\delta(y-1) + b\delta(y+1) + g(y)$

2)
$$a\delta(y+1) + b\delta(y) + c\delta(y-1) + g(y)$$

3)
$$a\delta(y+2) + b\delta(y) + c\delta(y-2) + g(y)$$

4)
$$a\delta(v + 2) + b\delta(v - 2) + g(v)$$

Solution:

$$Y = h(X) \tag{1}$$

$$Y = \begin{cases} -1 & X < -2 \\ X+1 & -2 < X < -1 \\ 0 & -1 < X < 1 \\ X-1 & 1 < X < 2 \\ 1 & X > 2 \end{cases}$$

$$(2)$$

$$\left(\Pr(X < -2) \quad Y = -1 \right)$$

$$p_{Y}(y) = \begin{cases} \Pr(X \le -2) & Y = -1 \\ \Pr(-1 < X \le 1) & Y = 0 \\ \Pr(X > 2) & Y = 1 \end{cases}$$

$$= \begin{cases} 1 - Q(-2) = Q(2) & Y = -1 \\ Q(-1) - Q(1) = 1 - 2Q(1) & Y = 0 \\ Q(2) & Y = 1 \end{cases}$$

$$(3)$$

$$= \begin{cases} 1 - Q(-2) = Q(2) & Y = -1 \\ Q(-1) - Q(1) = 1 - 2Q(1) & Y = 0 \\ Q(2) & Y = 1 \end{cases}$$
 (4)

For -1 < Y < 0

$$Y = X + 1 \tag{5}$$

$$Pr(Y \le y) = Pr(X \le y - 1) \tag{6}$$

$$= 1 - Q(y - 1) \tag{7}$$

$$= Q(1 - y) \tag{8}$$

$$p_Y(y) = \frac{d}{dy}Q(1-y) \tag{9}$$

$$=\frac{1}{\sqrt{2\pi}}e^{-\frac{(1-y)^2}{2}}\tag{10}$$

For 0 < Y < 1

$$Y = X - 1 \tag{11}$$

$$Pr(Y \le y) = Pr(X \le y + 1) \tag{12}$$

$$= 1 - Q(y+1) \tag{13}$$

$$= Q(-1 - y) (14)$$

$$p_{Y}(y) = \frac{d}{dy}Q(-1-y)$$
 (15)
= $\frac{1}{\sqrt{2\pi}}e^{-\frac{(1+y)^{2}}{2}}$ (16)

$$=\frac{1}{\sqrt{2\pi}}e^{-\frac{(1+y)^2}{2}}\tag{16}$$

Therefore,

$$p_{Y}(y) = \begin{cases} Q(2) & Y = -1\\ \frac{1}{\sqrt{2\pi}} e^{-\frac{(1-y)^{2}}{2}} & -1 < Y < 0\\ 1 - 2Q(1) & Y = 0\\ \frac{1}{\sqrt{2\pi}} e^{-\frac{(1+y)^{2}}{2}} & 0 < Y < 1\\ Q(2) & Y = 1 \end{cases}$$
(17)

$$p_{Y}(y) = \delta(y+1)Q(2) + \delta(y)(1-2Q(1)) + \delta(y-1)Q(2) + \frac{1}{\sqrt{2\pi}}e^{-\frac{(1-y)^{2}}{2}}(u(y+1)-u(y)) + \frac{1}{\sqrt{2\pi}}e^{-\frac{(1+y)^{2}}{2}}(u(y)-u(y-1))$$
(18)

which is in the form,

$$p_Y(y) = a\delta(y+1) + b\delta(y) + c\delta(y-1) + g(y)$$
 (19)

where,

a,b,c are non-zero constants

g(y) is a piece-wise continuous function
